UNIQUE MEDIA-ENABLED ARCHITECTURE

- Distributed and virtualized software application gateways/interfaces
- Redundant, open standards-based voice, video, text, data integration
- Content aggregation at the core enabling efficient, reliable and geo-diverse delivery to the dispatch control room, anywhere

INTEGRATION FLEXIBILITY

- Tait sourced or Bring-Your-Own Content
- Open Application Programming Interfaces (APIs) based on protocol standards
- Seamless integration of different communication methods and technologies

MULTIMEDIA MISSION CRITICAL COMMUNICATIONS

- Bringing together voice, video, text, data and mapping; all in real-time in one application
- Enabling any media, any device on any service and any network, any time

ENHANCED USER EXPERIENCE

- Easy to use web-based user interface
- Clear and concise communication based on dispatch needs
- Partitioned screen design enabling a more efficient and focused workflow
- Decluttered and prioritized content presentation expediting call management
- Translation feature when texting should language barriers exist

NEXT GENERATION CONTROL ROOM

- No longer voice centric, integrating any information source i.e. radio, telephony, multimedia and other forms of communication
- Maximum uptime and availability through redundant, resilient and geo-diverse cores
- Easily integrate and migrate between technologies, analog to digital radio, on-prem or cloud-based telephony, streaming surveillance video, cellular text messaging, etc.
- Virtualized software gateway interfaces utilizing standards based protocols simplifying corporate IP-network deployment
- Secure communications based on TLS: SIP, HTTPS, WebSocket secure

- Integration of real-time voice and data recorders with recording replay of all incident content

TAIT LIFEX SIMPLICITY

- Pre-packaged core available for streamlined installation, modularized expansion and application extensibility simplifying growth, evolution and maintenance
- Software radio gateways supporting SIP Telephony, P25 DFSI/CSSI, DMR Tier 2/Tier 3, ED-137 and Tetra
- Embedded multimedia recording and retrieval or external SIPREC audio output for third party recorder integration
- Configurable user interface supporting individual, role or standard profiles

ONGOING MAINTENANCE AND SUPPORT

- Software updates, technical support and system security requirements are managed as part of active maintenance service
- Security patching for all OS and applications included in maintenance service
